Notes 4

1. How to install and remove software using the APT command

To install software

- sudo apt install [...]

To remove software

- sudo apt remove [...]
- sudo apt purge [...]

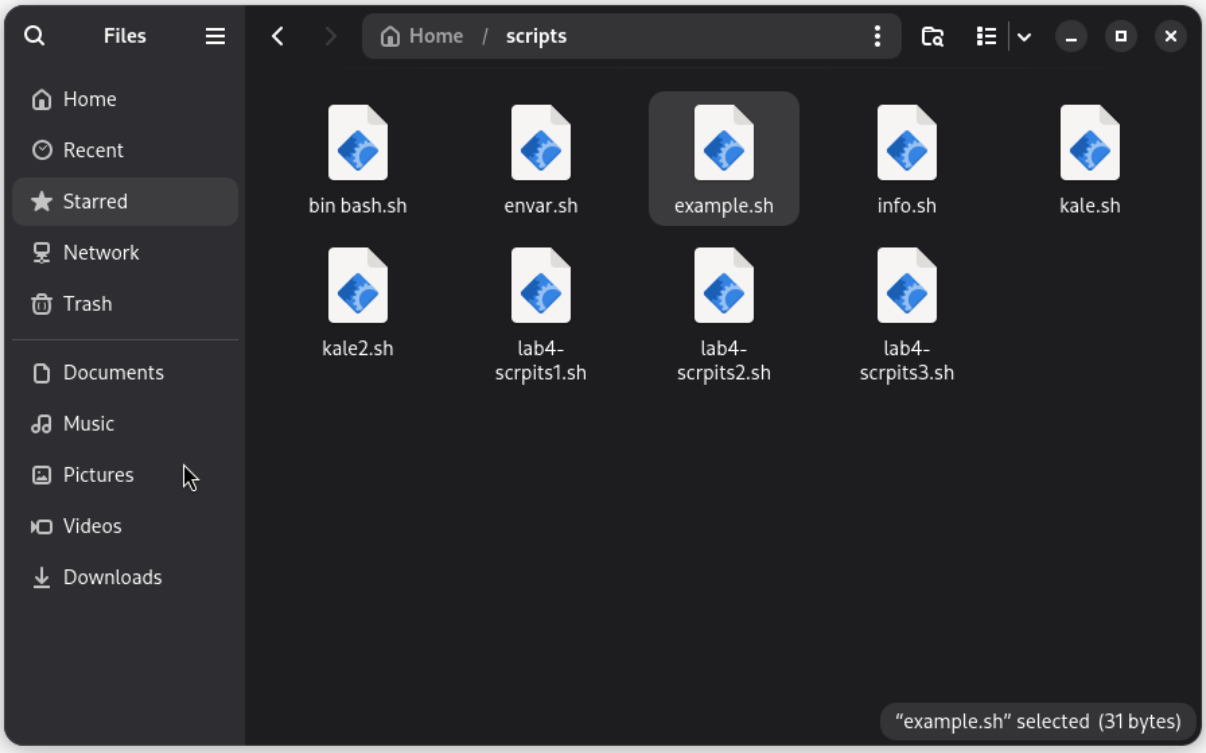
Honorable mention

- sudo apt auto (either clean, remove, or purge)
- can be in combination to wipe the software off completely

2. How to create a shell script

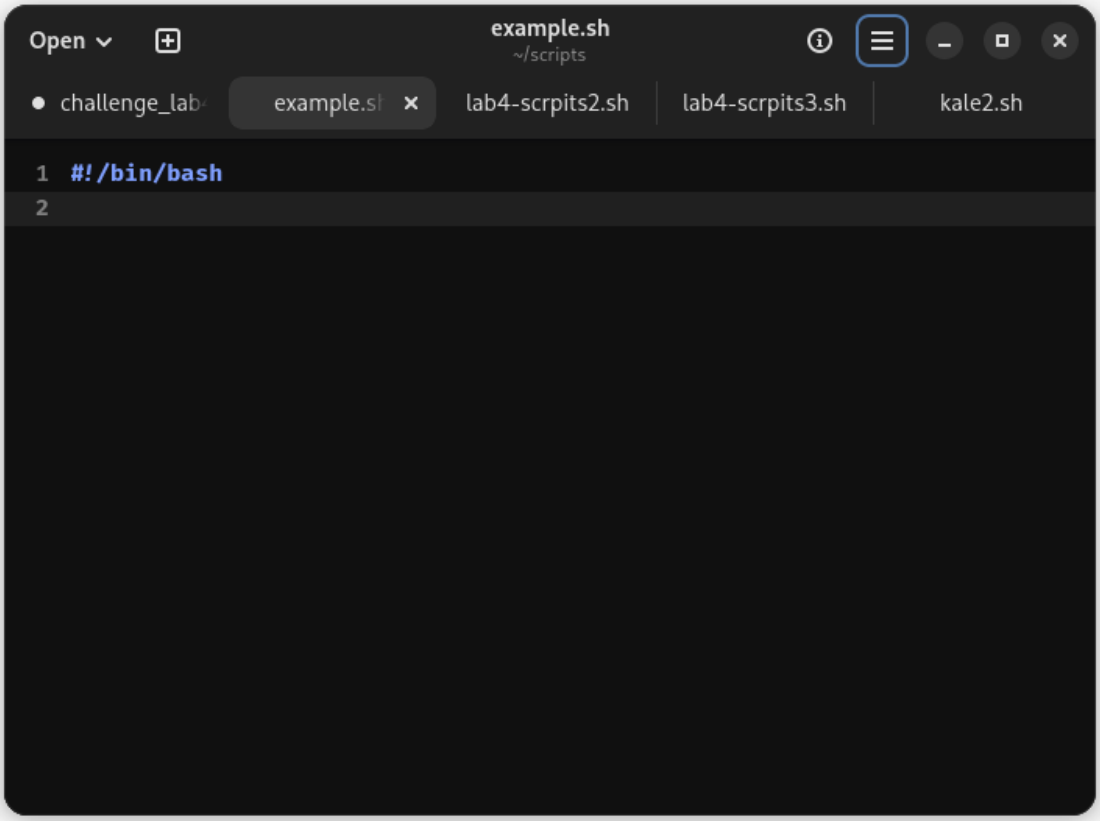
Step 1. Create a the file "anyname".sh

*created either in the text editor with the .sh extension or in the file manager.



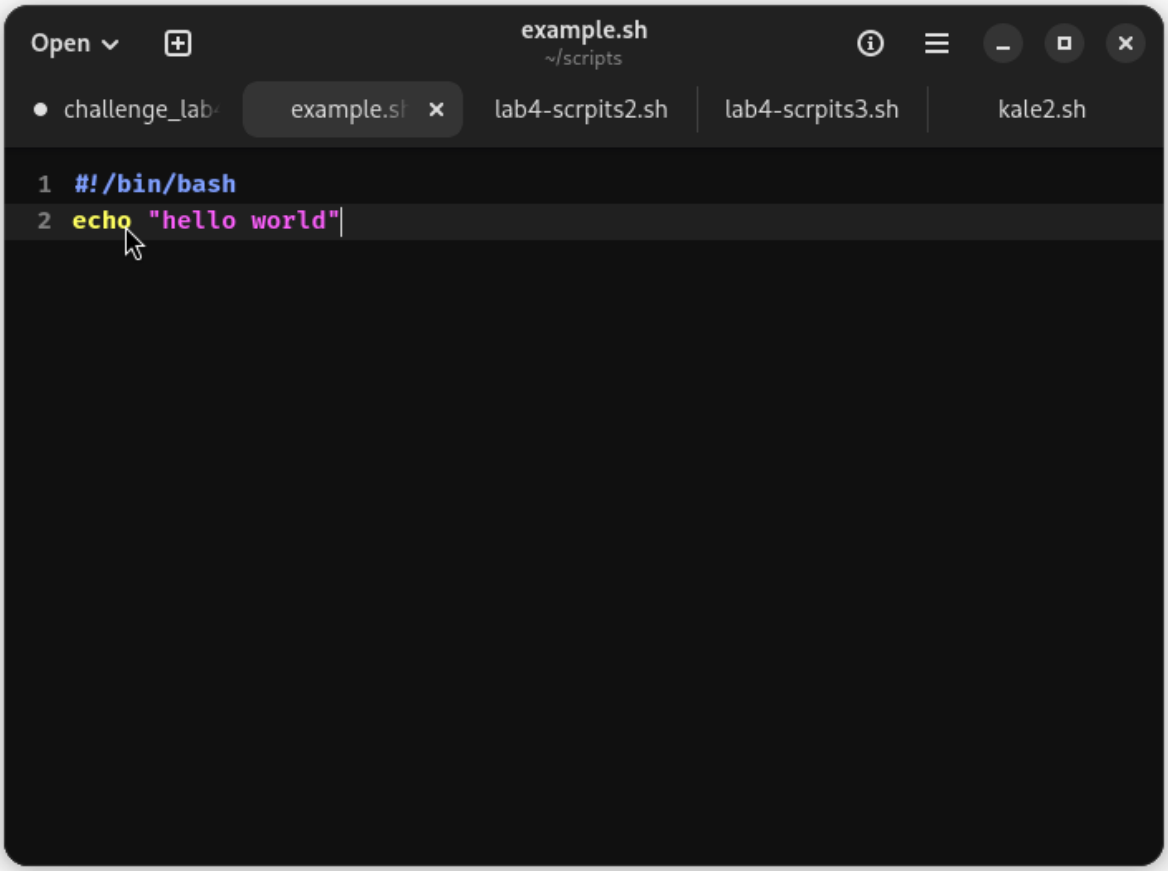
Step 2. Add shell declaration

- #!/bin/bash



Step 3. Add your code

- Using echo for example can display a message



Step 4. Execute the script

- Please note that adding the script declaration alone would leave the terminal returning nothing; This does not mean it did not run.
